

LEAN SIX SIGMA TRAINING & SUPPORT PROGRAMS

Embedding Lean for Sustainable Results:

Lean Six Sigma is a systematic methodology that combines the principles of Lean—focused on eliminating waste—with Six Sigma’s data-driven approach to improving quality. This powerful combination helps organisations streamline operations, reduce costs, and improve both the efficiency and effectiveness of their processes. Lean can help an organisation reduce waste and improve its productivity by up to 40%. Our Lean training system is designed to create lasting impact by focusing on core principles and systems rather than just tools.

Program Overview:

Our Lean Six Sigma learning framework offers a comprehensive journey, guiding participants through essential principles, ideal behaviours, and practical tools to embed and lead excellence. The programme spans five levels of certification, each focusing on increasing capability, leadership, and operational excellence. The Enterprise Excellence Group also offers one further stage for Leadership Development: The Lean Leader.

This program approach allows leaders to embed lean within their organisation “their way” which improves the embedding success rate by over 90%:

1. **Lean Awareness** - White Belt
2. **Lean Foundations** - Yellow Belt
3. **Lean Practitioner** - Green Belt
4. **Lean Coach** - Black Belt
5. **Lean Master** - Master Black Belt
6. **Lean Leader** - Adaptive Leadership

Successful Lean Adopters the EEG way:
